

Course title: Residential Steam Showers: Benefits, Specification and Design

Course number: Steam Shower

Provider number: 40107649

Course description:

The trend in today's bathroom design is to create a spa environment. A steam shower nicely fits those criteria as a perfect place to escape and relax and renew. This course will help you answer your clients' questions about the health and welfare benefits and water conservation savings of a residential steam shower. It covers specifying components to meet the client's wishes and the elements of steam shower design.

Presentation Length/ AIA Learning Units:

One hour/ One Learning Unit (1 LU)

Learning Objectives:

The participant will be able to:

Successfully describe bathroom/shower design trends, given certain economic conditions.

Successfully describe the health and wellness benefits of a steam shower, given the client buying criteria.

Accurately calculate the water savings of a steam shower, given the number of shower outlets or tub size.

Successfully describe the elements of steam shower design, given the given the client buying criteria.
